

COLD WATER WASH SKID: ENGINE POWERED

The **CPS Series** is a rugged cold water skid built to tackle the toughest jobs. A heavy gauge powder coated steel frame protects vital components and a smooth running twin cylinder engine, with low oil shutdown, ensures a long life of industrial use. Low RPM belt drive pump runs cooler and quieter and is ideal for use when drawing water from a tank. A 4 gallon fuel tank allows for long run times between fill ups, and its remote location away from the engine provides for safe refueling that reduces the risk of fire from fuel spills. Flexible mounting options, you choose your level of portability: on a trailer or tank skid, on wheels, or stationary. *Requires group U1 235 CCA battery, not included.* Dimensions: 32"Lx24"Wx27"H

Standard frame color is red, shown below with optional black frame.

Model CPS30005VHR
3000psi @ 5.0gpm
(207bar, 19liters)
479cc Vanguard engine

Model CPS40005VHR
4000psi @ 4.8gpm
(276bar, 18liters)
570cc Vanguard engine

Standard Features:

- Commercial/Industrial twin cylinder, electric start gas engine (*diesel engine option available*)
- Belt driven pump
- Remote mounted, non-integrated unloader
- Heavy duty, insulated spray wand, trigger gun, quick connect nozzles and 50' hose

Options...

Downstream injection kit (#AC340), Hour meter (AM512), Wheel kit (#AHS13), Tank skid/reels (200gal. #T185TWH, (270gal. #T270TWH), Tank Skid Transporter (#TSKDT), Transport trailer (200gal. #T185CPH)

Optional tank skid transporter

Optional transport trailer or tank skids include inlet hose, stainless inlet and high pressure hose reels, bulk water tank and factory assembled.
